Dr. J. Lederberg
Department of Genetics
University of Wisconsin
Madison, Wisconsin

Dear Dr. Lederberg:

I am interested in obtaining several Escherichia coli mutants, Those I wish to obtain include thiaminless, cystineless, and purineless organisms. A ~~purineless~~ ^{zanthinless} organism would be preferred among the purineless mutants.

If you happen to have any of the above mentioned mutants in your possession I would deeply appreciate your sending them to me. These organisms would be extremely valuable in connection with some of my work here.

Sincerely,

Jackson W. Foster
